ФЕДЕРАЛЬНОЕ ГОСУДАРСТВЕННОЕ БЮДЖЕТНОЕ ОБРАЗОВАТЕЛЬНОЕ
УЧРЕЖДЕНИЕ ВЫСШЕГО ПРОФЕССИОНАЛЬНОГО ОБРАЗОВАНИЯ
НОВОСИБИРСКИЙ ГОСУДАРСТВЕННЫЙ ТЕХНИЧЕСКИЙ УНИВЕРСИТЕТ

Лабораторная работа № 2
по дисциплине "Современные информационные технологии"
на тему "Разработка графического интерфейса. Классы-коллекции. Паттерны
проектирования поведения объектов"

Студент   Кузьмин Д.С.
Группа   АВТ-318
Преподаватель   Васюткина И.А.
Вариант   8

Новосибирск 2015 г.

Цель работы

1. Познакомиться с основными компонентами построения графических интерфейсов библиотек AWT и Swing в программах на Java. Изучить классы менеджеров компоновки.

2. Изучить назначение классов-коллекций, их виды, и методы работы с классами-коллекциями.

Задание варианта

Вариант задания:

Список транспортных средств на дороге состоит из двух категорий: автомобили и мотоциклы. Автомобили генерируются каждые N_1 секунд с вероятностью P_1. Мотоциклы генерируются каждые N_2 секунд с вероятностью P_2.

Задание

Доработать программу, созданную в лабораторной работе № 1:

1. Поделить рабочую область окна приложения на 2 части. Визуализация переносится в одну часть окна, панель управления в другую;

2. Добавить кнопки «Старт» и «Стоп» в панель управления. Они должны запускать и останавливать симуляцию соответственно. Если симуляция остановлена, то кнопка «Стоп» должна блокироваться. Если симуляция идет, то блокируется кнопка «Старт». Клавиши B и E должны функционировать по-прежнему;

3. Добавить переключатель «Показывать информацию», который разрешает отображение модального диалога из 7 пункта задания;

4. Добавить группу из 2 исключающих переключателей: «Показывать время симуляции» и «Скрывать время симуляции». Клавиша T должна функционировать по-прежнему;

5. Используя различные менеджеры компоновки, сформировать интерфейс пользователя согласно индивидуальному заданию;

6. Добавить в программу главное в меню и панель инструментов, в которых продублировать основные команды вашего интерфейса пользователя;

7. При остановке симуляции должно появляться модальное диалоговое окно (при условии, что оно разрешено) с информацией о количестве и типе сгенерированных объектов, а также времени симуляции. Вся информация выводится в элементе TextArea, недоступном для редактирования. В диалоговом окне должно быть 2 кнопки: «ОК» и «Отмена». При нажатии на «ОК» симуляции останавливается, а при нажатии на "Отмена", соответственно продолжается;

8. Предусмотреть проверку данных вводимых пользователем. При вводе неверного значения обрабатывать исключительную ситуацию: выставлять значение по умолчанию и выводить диалоговое окно с сообщением об ошибке;

9. Реализовать следующие элементы управления:

   • Периоды рождения объектов – текстовые поля;

- Для задания вероятностей рождения объектов комбобокс и список (шаг значений 10%);
- Дополнить интерфейс поясняющими метками.

Приложение А. Листинг программы

DrawPanel.java

```java

    public float getY() {
        return y;
    }

    public void setY(float y) {
        this.y = y;
    }

    @Override
```

```java
    public void stop() {
        isStarted = false;
    }

    @Override
    public void start() {
        isStarted = true;
    }

    public boolean isStarted() {
        return isStarted;
    }
}
```

Вывод

Произошло ознакомление с особенностями технологии Java и была изучена часть синтаксиса языка Java. Была разработана программа для упрощенной имитации поведения объектов.
